

SPRINT REVIEW

01/05/2019

no. of people per task : 3 too many
- introducing an

scope-creep / scope-reduction on issue

Testing : relationship with user story?

Major challenge w/testing : new commands
lots of integration

Front-end/controller interaction.

Authentication test challenges:
promises

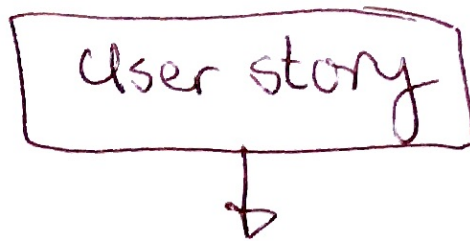

JS load order on page.

Visual HTML test automation.

Acceptance criteria: not drive user story

Developer stories ok, but not on story
board → keep as issue.

→ need to

discuss details
& implementation options

External pressures outside project parameters.

Next week pressured for other submissions.

→ Collaboration: group dynamic quite intense

- more agreement needed.
- robust engagement great, but deferment on unknown issues.

Merit is team speciality across single user story

Backlog

→ # 95 → missing database storage

not completed.

-log

- date/time
- nature of change
- who made the change.

- group management

capturing of log.

presentation of log
