

## **USER STORIES I THINK WE SHOULD TACKLE IN SPRINT 4:**

### *Tyson's suggestions:*

We need to get groups working in order to fulfil basic requirements. To this end, I propose the following user Stories:

**1** – As a trip planner, I want to see group members in a single list, so that I can easily manage a trip #37

Proposed Acceptance criteria:

- User can see names or pictures of the group members on a trip, next to the trip name

**2** – As a website user who I want to be able to leave group trips when I don't want (or cannot) go on the trip. (NEW)

Acceptance criteria:

- User can leave trips from the trip-manager page
- An visible but unobtrusive warning is shown to confirm the action.
- "Leaving" a trip removes a user from the trip (and removes all associations between the user and the trip)
- If the user is the last/only person on a trip, the trip is deleted.
- Deleted trips are removed from the database along with its destinations

### *Rebecca's suggestions:*

**1** – As a new user, I want to be instructed on how to use the website, so I can effectively use the site. #48

Short tutorial after registration is complete that shows user what everything is/does.

**2** – As a trip planner, I would like to be able to delete trips that I don't want to edit anymore. (NEW)  
Delete button next to trip title on Trip Manager page. When pressed, trip and its associated destinations are deleted from appropriate DB tables.

**3** – As a trip planner, I want to see group members in a single list, so that I can easily manage a trip #37

Display group members for a given trip on the Trip Manager page under each trip.

**4** – As a user, I want to use local time on the website, so I do not get confused while on a trip #55  
Change time zone from UTC to whatever region the user is using.

**5** - As a trip planner, I want to be able to name my trip title anything I want without the site crashing. (NEW)

Remove any characters the user inputs in the input fields from the SQL query string but don't modify the display of the title. For example, I can still name my trip "Rebecca's trip", but the query string won't have the ' character in it.

Thabang's suggestions:

- 1 – As a trip planner, I want to see my group members on a single list,... #37
- 2 – As a group member, I want to generate a PDF of my itinerary... #43
- 3 – As a user, I want to have the option to remember my login details... # 52
- 4 – As a user, I want to review the places I visited # 61

**TASKS I THINK WE SHOULD TACKLE IN SPRINT 4:**

- TESTING! We will not even meet 'acceptable' on the marking rubric for this section if we do not do a significant amount of testing this sprint.
- Testing, testing, testing! We should aim to have at least 10% test coverage, I propose.
- Code clean up and commenting.
- Make sure all our Database entries are being sanitised
- Move the Terms and Conditions into a Modal, remove the extra page and JS.
- Add a nicer loading/waiting screen after sign-in, before the Trip page loads
- Make a populated database for the release site so there are nice examples for the presentation
- Having met basic functionality we should focus on testing everything we possibly can.
- Need to change constant email address to env. variable so we can test on local and online

**OTHER THINGS TO NOTE FOR SPRINT 4:**

- We will only be able to work on Monday and Tuesday. That means our velocity is only around 2-4 in total. That's 4 small tasks, or two medium, or one large, all together. Perhaps we can meet and work together in the afternoon on Tuesday, make a push before release?
- Keep user stories basic and do not be tempted to add any functionality or modify code to 'be better'. USE ALL TIME FOR TESTING!
- After sprint 4 is done (Tuesday 14 May), spend the rest of the week testing and ensuring all documentation that is needed for the project exists and is correct and of a high standard.
